

Welcome to our Car Racing Game! This is a simple guide to help you set up the environment and run the game.

## Prerequisites

---

- **Anaconda Navigator:** Make sure you have Anaconda Navigator installed. (<https://www.anaconda.com/download>)
- **Extract the files of car\_racing\_game** Make sure to extract the files of the zipped folder

## Installation (only needed the first time)

---

1. Open the Anaconda Navigator terminal:

- Open the "Anaconda Prompt"

2. Go to the car\_racing\_game directory

Copy the directory in which you open this file and use the cd command like the example:

Copy the directory:

```
cd Desktop/Downloads/car_racing_game/car_racing_car
```

3. Create and set the environment to run the game

- Create the environment:

```
conda create --name car-game-env python=3.11
```

- Activate the environment to install the necessary Python packages

```
conda activate car-game-env
```

- Install the necessary Python packages

```
pip install -r requirements.txt
```

## Run the Game

---

Assuming you are already at car\_racing\_game, if not change to that directory

```
cd game
```

Run the game

```
python main.py
```
