#### Instructions

To run the app you need to do the following:

1. Make sure you have extracted this folder contents.
2. Put in your XAMPP (<https://www.apachefriends.org/download.html>) htdocs folder the project\_scientific\_conferences folder. You can find the folder in this directory: C:\xampp\htdocs
3. Open your XAMP and start the Apache and the MySQL Modules.
4. In the browser open your phpmyadmin: <http://localhost/phpmyadmin/> and import the project\_scientific\_conferences sql file.
5. At this step you are able to access the app BackOffice were you will be able to manage the app contents:  
[http://localhost/project\\_scientific\\_conferences/backoffice/index.php](http://localhost/project_scientific_conferences/backoffice/index.php) to enter you must login with the following credentials: Username: Admin Password: admin
6. Now you need to place the Project folder in the Android Studio Projects folder. You can find that folder through this directory:  
`C:\Users\User\AndroidStudioProjects`  
substitute "User" with your computer user name.
7. Finally open your Android Studio (<https://developer.android.com/studio>) and open the Project folder and run the app.
8. Be advised this project was developed using the Koala version of android studio and the Pixel 8 Pro API 34 version of emulator.
